Education

• UNIVERSITY OF JAMMU

Bachelor of Technology CGPA: 8.5

Jammu &
Kashmir, India
June 2025 -
June 2029

Courses: Operating Systems, Data Structures, Analysis Of Algorithms, Computer Network, Machine Learning, Networking, Databases,DBMS,OOPS

Skills Summary

- **Languages:** Python, C++, JavaScript, SQL, Java, HTML, CSS, OOPS
- **Libraries/Framework:** ReactJS, NodeJS, Express, Bootstrap, TailwindCSS, Django, OpenCV, Matplotlib
- **Tools/Platform:** GitHub, GIT, Jupyter Notebook, MySQL, VS Code, Pycharm, IntelliJ IDEA, Linux
- **Database:** SQL, MongoDB

Projects

- **CPU Scheduling Algorithm Visualizer (HTML, CSS, JavaScript, Algorithms, Bootstrap) Link:** The CPU Scheduling Algorithm Visualizer is a Web-Based UI that shows How to CPU Scheduling Algorithms work Internally in the CPU.
 - * Algorithms Implemented: **FCFS, SJF, RRS, LJF, PSA, LRTE, SRFT**
 - * One of the most difficult tasks is how to implement all the algorithms in Backend, and simulate dynamically on user command, and represent them on the UI using graphs and tables.
 - * Implement All Algorithms using JavaScript in Backend one of the toughest Task.
- **My AI Assistant (Python, pytsx3, speech recognition, smtplib, subprocess, sys) Link:** My personal assistant, like Alexa, is able to perform tasks like Alexa.
 - * Task Perform: Save Files, ShutDown and Restart System, Open Folder, Send Message on WhatsApp, Open Program, Send Email, Search in Wikipedia, Play Music on YouTube, Search on Google, Open Applications * The toughest part of this project is sending the online command from offline for the output.
- **Advanced Binary Calculator (Python,Tkinter) Link:** This is the first project in my B Tech. I saw the problem in my first year. We had a subject that is known as **Digital Electronics**, and students get very confused in conversion, so I made this project, and my entire batch used this project.
 - * Task Perform: Decimal Conversion, Binary Conversion, Octal Conversion, Hexa-Decimal Conversion, Addition, Subtraction, Multiplication, Division, 1's and 2's Complement, Left and Right Shift, Binary Encryption and Decryption, AND, OR, XOR
- **Sorting Algorithm Learner with GIF (Python,Tkinter) Link:** Implement all Common Sorting algorithms with Details Analysis and Present using GIF, the user only enters numbers and selects Sorting Algorithm.
 - * Task Perform: Bubble Sort, Insertion Sort, Selection Sort, Heap Sort, Counting Sort, Merge Sort, Quick Sort.
- **Weather App (HTML, CSS, JavaScript, OpenWeather API) Link:** The Weather App is a web application that fetches real-time weather data from the OpenWeather API and presents it to the user in a

user-friendly UI. * Display the current weather conditions including temperature, humidity, wind speed, and weather description.

* Allow users to search for weather data of different cities.

* Automatically detect and display the weather data of the user's current location (optional).

* Responsive design to ensure a seamless experience across devices.

Coding Achievements

- 1100+ Problems Solved on @LeetCode, Best Contest Rank 4/4 1084/3000, Under 8K Global Rank
 - 1200+ Problems Solved on @GeeksForGeeks, Best Contest Rank 3/3 74/4000
 - GFG **Global Rank 115**, and Under 100 Monthly Rank, Institute Rank 1
 - **Top Coder and High Rated Coder in My Collage**
 - **1500+ Problem Solved on Different Different Platform**
 - CodeKaze 2023 Organized by Coding Ninjas **Institute Rank 1**
 - **All Time Coding Winner in My Collage Other's Achievements**
-

- 39+ Followers and 7K+ Content Views on @LinkedIn
- 2+ Followers, 200+ Contribution and 500+ Commits on My Personal Projects and 4K+ Profile Views on @GitHub
